

Halli-Santhe Digital – Project Requirement Document

1. Project Title

Halli-Santhe Digital – Hyper Local Marketplace for Village Artisans

2. Introduction

Halli-Santhe Digital is an Android application designed to support local artisans and small-scale village sellers by providing a digital marketplace for showcasing and promoting their handmade products. Many artisans currently depend only on weekly physical markets, which limits their customer reach and sales opportunities. This application aims to bridge the gap between rural sellers and urban buyers through a simple and accessible mobile platform.

The project promotes the concept of “Vocal for Local” by enabling traditional products to become digitally discoverable while preserving local craftsmanship and culture.

3. Problem Statement

Local artisans face difficulty in reaching a wider audience because their products are usually sold only in weekly village markets or fairs. Buyers are often unaware of available products unless they physically visit these locations. Due to limited digital presence, many traditional crafts are slowly losing market demand.

There is a need for a simple digital platform where:

- Artisans can upload and showcase products.
- Buyers can browse products remotely.
- Local businesses can gain better visibility and sales opportunities.

4. Project Objectives

The main objectives of the project are:

- To provide a digital catalog for local artisans.
- To connect village sellers directly with buyers.
- To promote traditional handmade products.
- To encourage digital commerce in rural communities.
- To create a simple and user-friendly Android application.

5. Proposed Solution

The proposed solution is an Android-based hyper-local marketplace application where artisans can upload product details including product name, price, category, and image. Buyers can browse products through categories, search for items, and contact sellers regarding product availability.

The application will provide:

- Simple product upload functionality.
- Category-based product browsing.
- Product search feature.
- Detailed product view with seller interaction options.
- Attractive UI inspired by traditional Indian markets.

6. Features of the Application

Artisan Module

- Add product name
- Upload product image
- Enter product price
- Manage product listings

Buyer Module

- Browse products in grid view
- Search products by name
- View detailed product information
- Contact seller for stock availability

Additional Features

- Empty state handling when no products exist
- Image compression for faster loading
- Responsive and colorful UI design

7. Technology Stack

Component	Technology
Frontend	Android Studio (Java/Kotlin)
Database	Firebase Firestore / Room Database
UI Components	RecyclerView, GridLayoutManager
Image Handling	Image Compression Techniques
Design	Material UI Components

8. User Flow

1. Artisan logs into the application.
2. Artisan uploads product details and image.
3. Product gets stored in the database.
4. Buyer opens the application and browses products.
5. Buyer searches or selects a product category.
6. Buyer views product details.
7. Buyer contacts seller regarding availability.

9. Expected Impact

The project will help:

- Increase income opportunities for rural artisans.
- Improve visibility of traditional crafts like Channapatna toys.
- Encourage digital adoption among small businesses.
- Create a “Phygital” marketplace combining physical and digital commerce.
- Strengthen local economies through direct buyer-seller connections.

10. Future Enhancements

Future improvements may include:

- Online payment integration
- Delivery and tracking system
- AI-based product recommendations
- Multi-language support
- Seller ratings and reviews
- Location-based artisan discovery

11. Conclusion

Halli-Santhe Digital is a socially impactful Android application aimed at empowering local artisans through digital technology. By creating an easy-to-use hyper-local marketplace, the project supports economic growth, preserves traditional crafts, and promotes digital commerce in rural communities. The application combines modern mobile technology with India's rich local market culture to create a sustainable and accessible platform for both sellers and buyers.
